

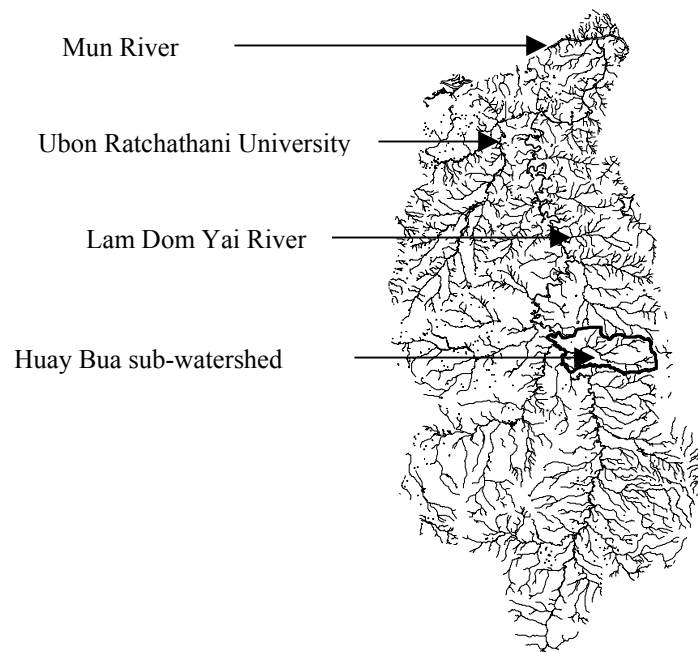

Map 1. Location of the study area in the Lam Dom Yai watershed of Ubon Ratchathani Province.

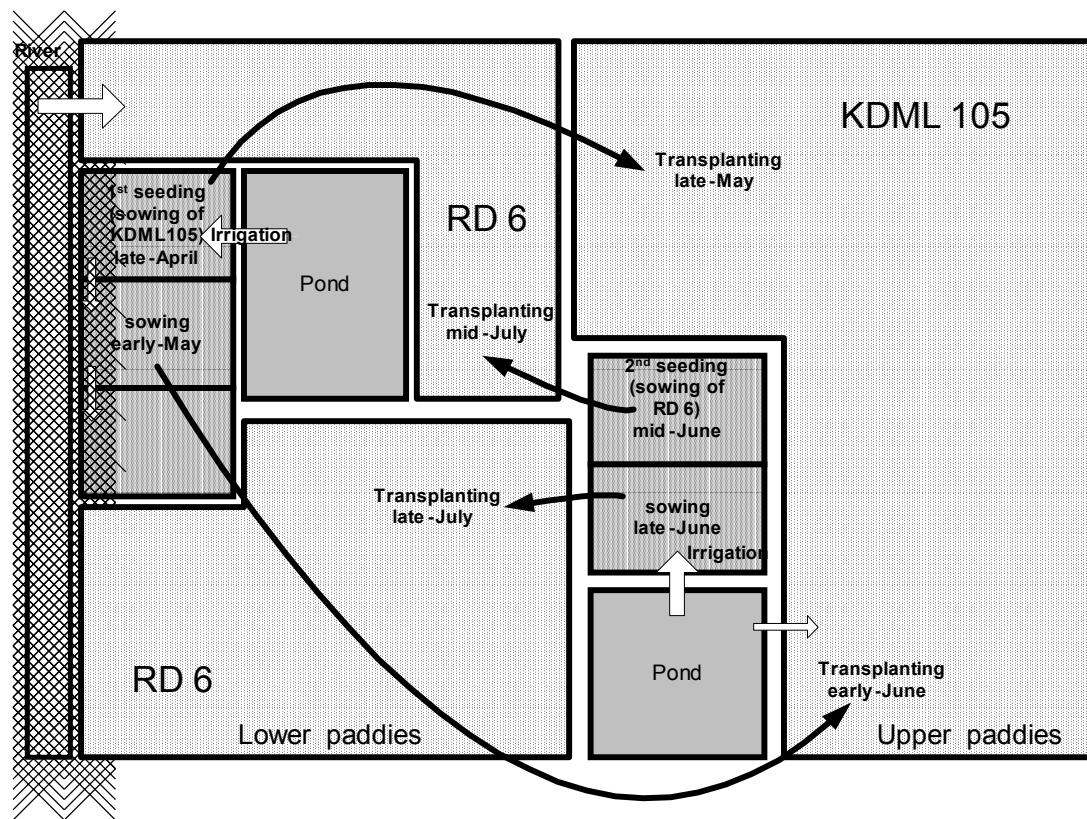

Figure 1. Main water uses and rice cropping pattern at the farm level in the Lam Dom Yai area of Ubon Ratchathani Province.

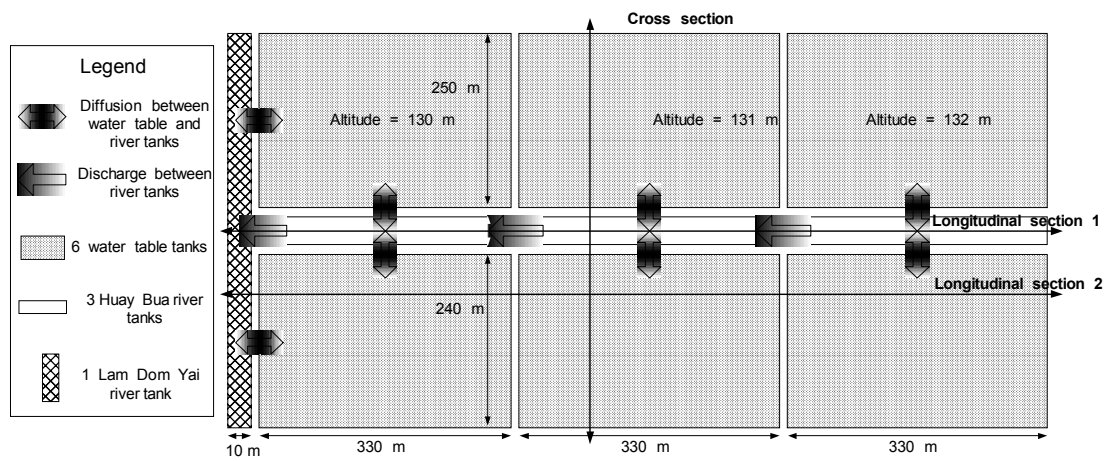

Figure 2. First layer of the model spatial entities representing the water table and the rivers.

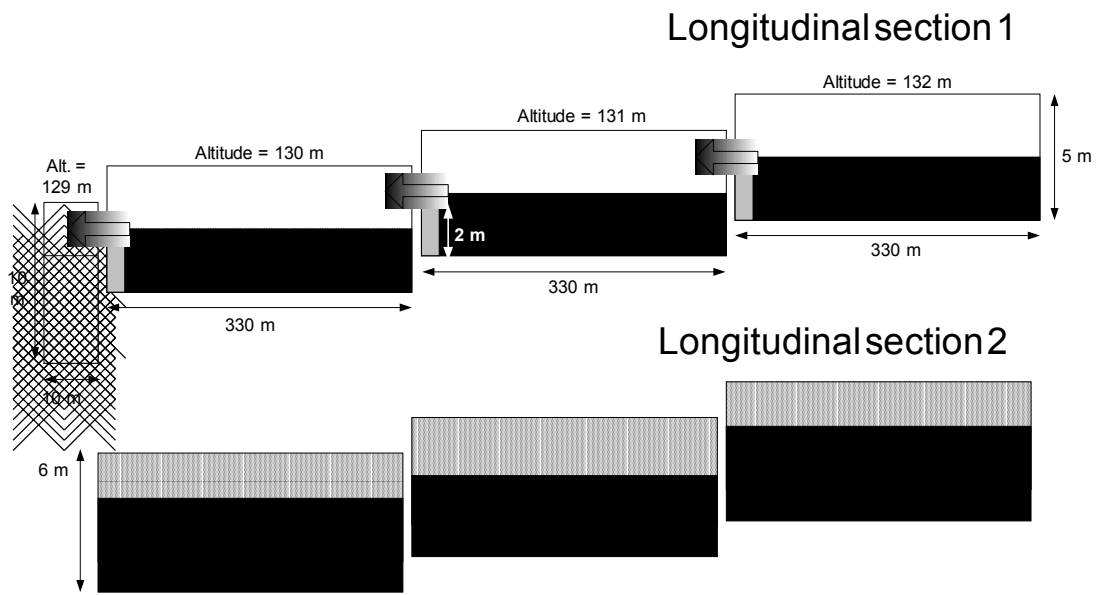

Figure 3. The three level terraced entities of the first layer in the model.

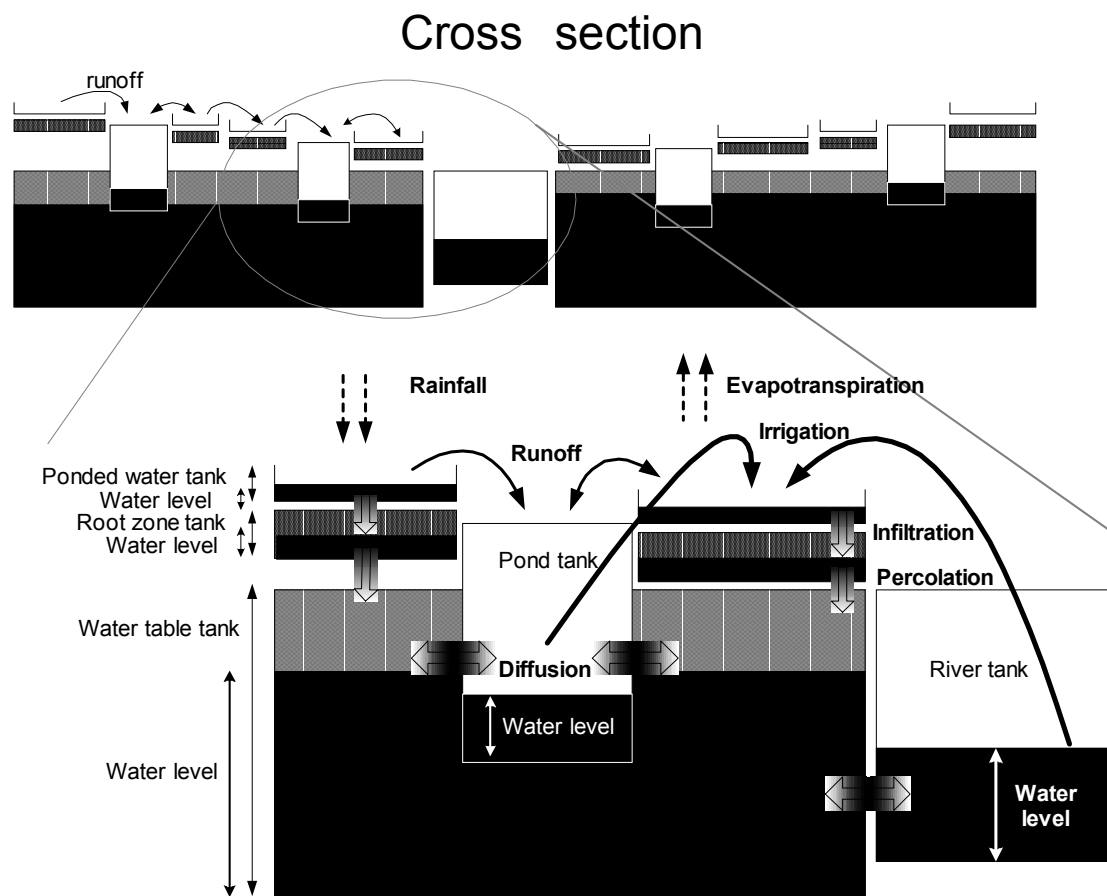

Figure 4. Structure and hydraulic functioning of the multi-agent model.

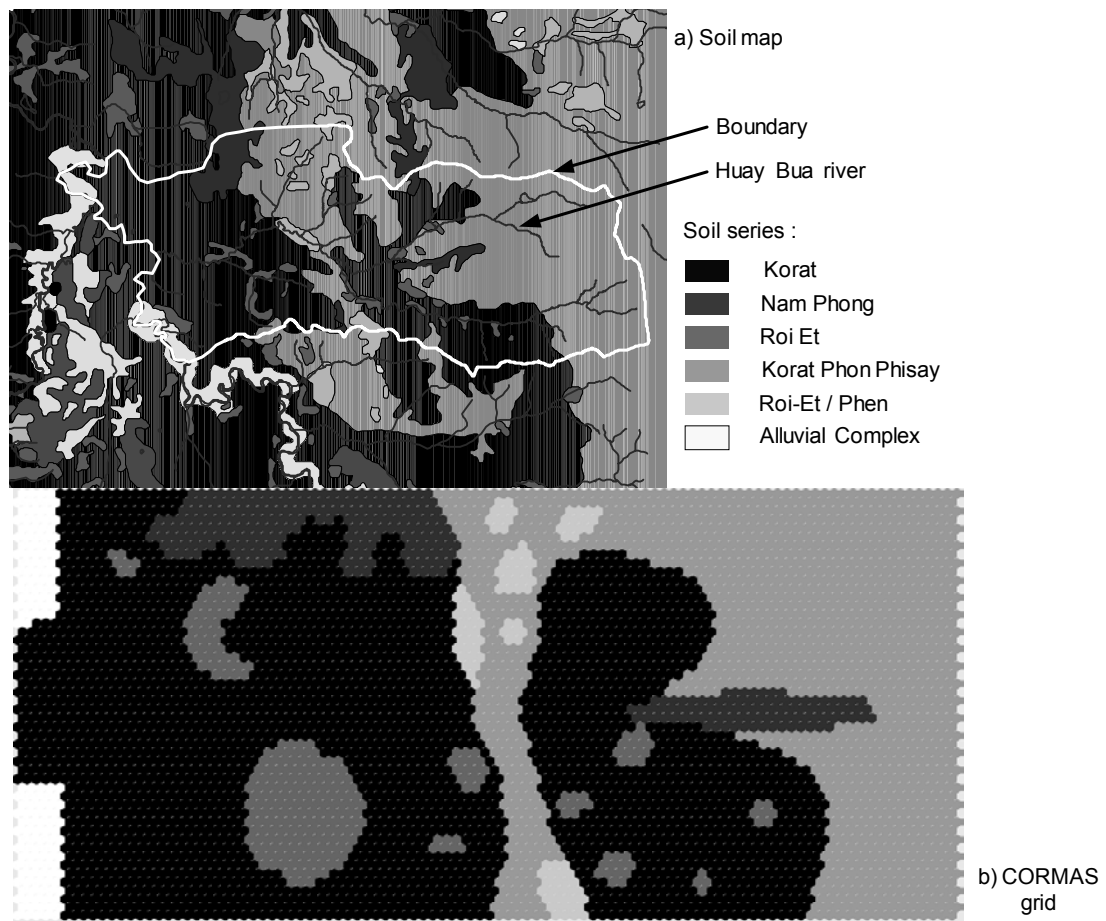

Figure 5. Distribution of the soil series on the soil map (a) and on their representation on the CORMAS grid (b).

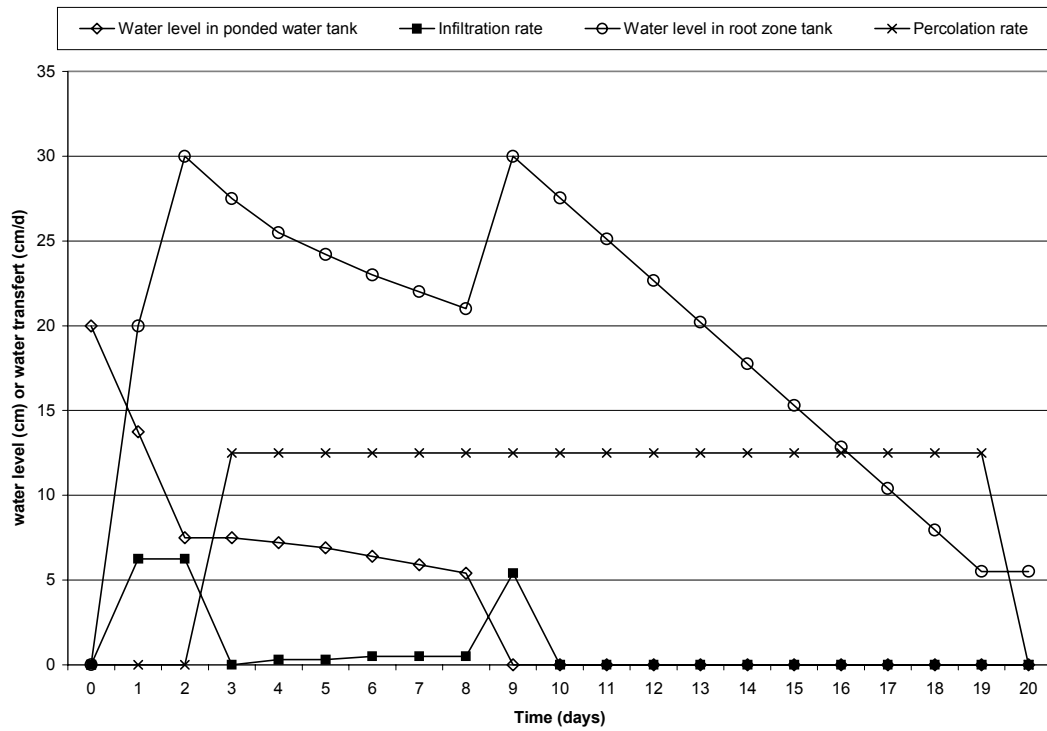

Figure 7. Verification of infiltration and percolation functions in a simulated field.

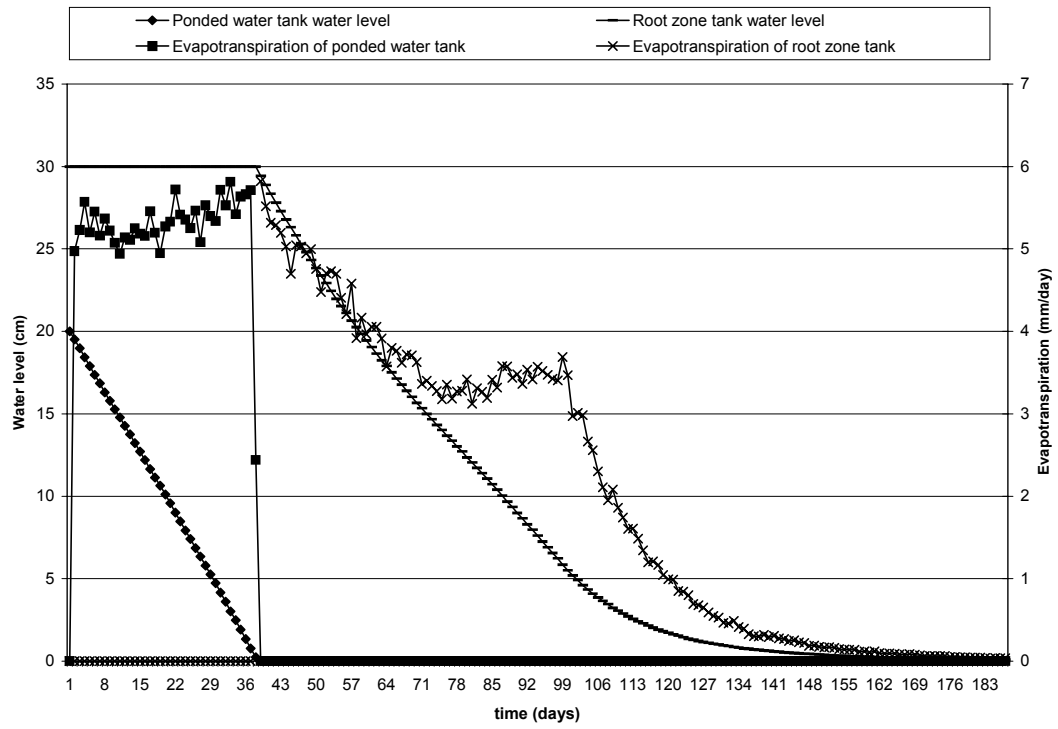

Figure 8. Verification of the evapotranspiration function at the simulated field level.

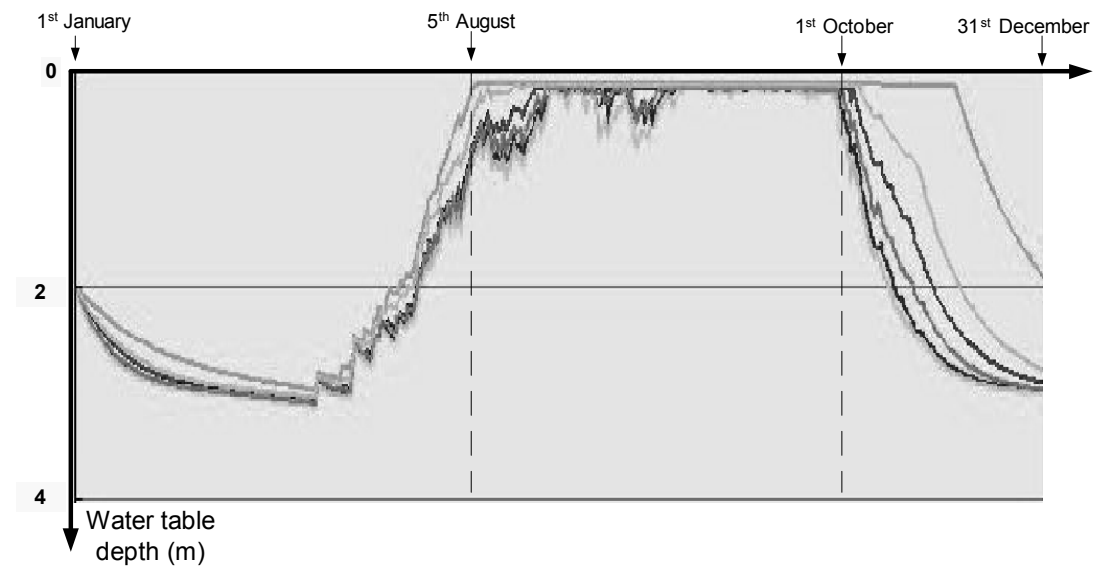

Figure 9. Calibration of the water levels in the six water table tanks of the model. (The six curves represent the water level in each water table tank).

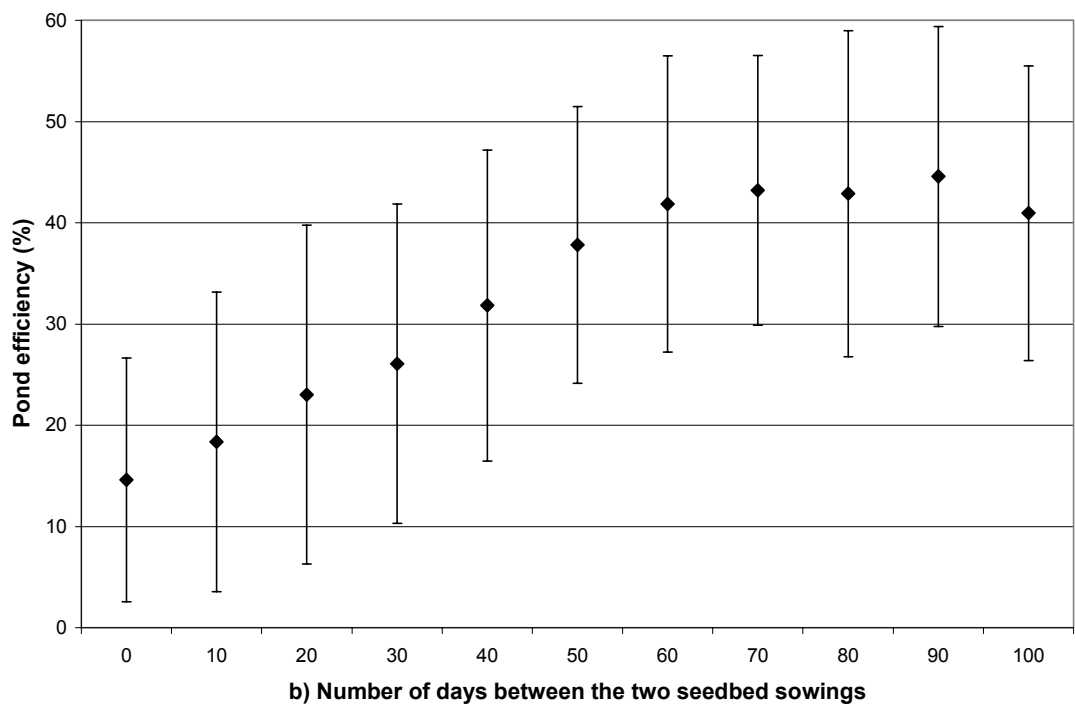

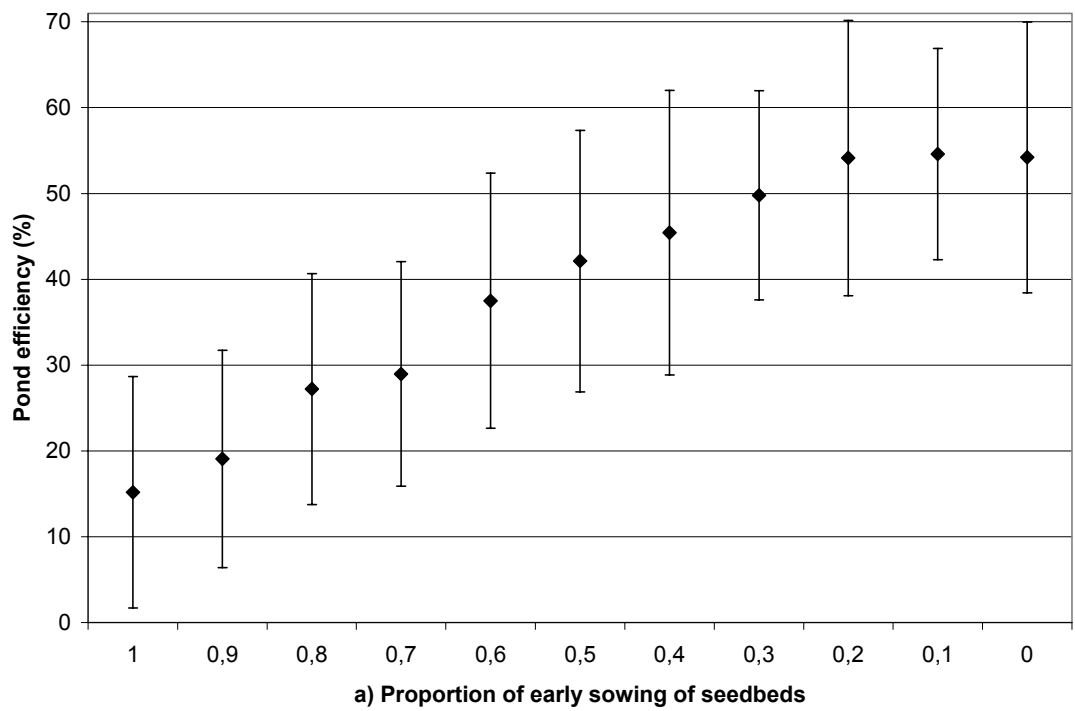

Figure 10. Sensibility analysis of pond efficiency according to variations in the proportion of early sowing of seedbeds (a) and the duration between the two nursery seeding periods (b).
