(b)

Figure 6. MS Excel Spreadsheet used in the RPG (a) Play-board (b) Simulation

1-7 in X-Axis indicate Year; Letters in parenthesis indicates rainfall pattern in two cycles, i.e. N: Normal rainfall and L: Low rainfall (e.g. NL means first cycle rainfall was “Normal” and it was “Low” in second cycle).

Figure 7. Land-use changes in (a) Linbukha and (b) Dompola over the cropping seasons during the first gaming session.

Figure 8. Comparison of land-use changes in two villages due to different modes of communication. (IND: Intra-village mode of communication; COL: Intra-village mode of communication)

(a) Linbukha-Intra Village Communication mode

(b) Dompola-Intra Village Communication mode

(c) Linbukha-Inter Village Communication mode

(d) Dompola-Inter Village Communication mode

1-7 in X-Axis indicate Year; Letters in parenthesis indicates rainfall pattern in two cycles, i.e. N: Normal rainfall and L: Low rainfall (e.g. NL means first cycle rainfall was "Normal" and "Low" in second cycle); From Other Village in Figure (d) means water shared between village.

Figure 9. Water Dynamics in two villages following two modes of communications

F1-F12 imply farmers coded as 1-12; V1=Linbukha; V2=Dompola; and Thruelpa, Chhep, Chatro and H/chu indicate farmer category based on water share.

Figure 10 : Income variation among farmer categories according to two modes of communication.

Figure 11. Annual income generated from three different modes of communication

Table 1. Farmers' response on swapping the role between two villages

Responses	Percent Respondent (n=11)
Did not like swapping the role (Farmer 2)	9%
Comparison of income between two villages (1, 3, 8)	27%
Understood the potential of potato in Linbukha and are motivated to try out in Dompola (9 & 11)	18%
Resource advantage of Linbukha farmers (10)	9%
Understood the problem of Dompola farmers (12)	9%
Possibility to grow potato in Linbukha (5, 6, 7)	27%
